PS-124/64 23 April 1964

11ORALIDUM FOR: Assistant for Administration
. Chief, Logistics Branch
THICH : Chief, CHA/PID (NPIC)
#05B Comparator25X1A and Plotter Plotter 25X1A
(a) Trip Report PS-120/64 25X1A (b) P&PS Staff Study - Procurement of a High Quality Chip Comparator dated 15 April 1963
a. PMD has been awaiting the advent of the long-promised "on-line" reasonable capability since the move into Programs have been 25X1A propagal for the Univae 490 for cortain camera systems and other programs are underway. Preliminary steps have been taken jointly by PMD and TMD personnel to tent out the on-line concept. These first steps, using a Microscope 25X1A and a relectype unit have been met with great enthusiasm by the analysts and has limited presently by the accuracy of the measuring instrument used and the universal presently of feeding data into the computer via the Teletype.
2. The basic types of measuring devices will eventually be used convertibutely by the PID analysts. These are the rear-screen projectors and elementary comparators. The prototypes of the rear screen devices are still to the production stage and will not be evailable for some time. The prototypes of the Decree Chip Comparator 405B is nearly completed at the manufacturers of the production of the PID Production Staff an company with PRO and 10 April 1964 (Ref.(a)). The comparator incorporates the highest limp vacuing optics available—the Pandem Dynazoom, the pany readout and communications console. This equipment will provide the analyst with a high quality chip comparator capable of operating on-line in the computer and requiring a minimum of knowledge and training for the operator with respect to the actual measuring process. The instrument will be of sufficient accuracy to handle all but the most specialized measurement problems.

	3. An additional component of both the rear-screen and comparator madurally systems is an on-line plotter output. This will allow the analyst to program at his work station a rectified plot for inclusion in reports or a base for the target complex which he is measuring with the comparator or near-screen projector.
